

software developer-
Ok, so we need to
make sure that for
the software, we
have a compatible
website that's easy
to use

user- We should
have a login system
so users can save
data and go back to
the website to refer
to their bookings

User- Once the user
makes a booking,
there should be an
email confirmation
with all the details
so that users won't
forget about their
booking

customer- there
should be a
database that
shows users and the
cinema which seats
are taken and how
many are available

Customer- We need
to make sure the
overall functionality
and layout of the
website is appealing
and useable by any
user

architectural
engineer- So, based
off the discussion,
we have concerns
about the
functionality of the
website, as well as
the design

software developer-
Ok, we need to
make sure we also
create a database
with a login system

Making it so when a user is logged into their account, they don't have to go through the process of creating an account when they want to pay for their ticket -Facilitator

Users should get a digital receipt summarizing their purchase right after buying their ticket
-Software Developer

**Adding a better date picking system where people pick the movie first and then pick the date they want to see it rather than the other way around
-Software Developer**

**Improve home page layout so it's easier to navigate
- Facilitator**

User should be asked to make an account every time they try to purchase a ticket -Software Developer
